EFFLUENT FILTERS can be installed in the OUTLET BAFFLE of a septic tank to prevent sewage sludge particles and scum materials from leaving the tank and accumulating in pipe sections and drainage components, leading to blockage and pre-mature failure. Effluent filters can easily be installed in newer PVC Outlet Baffles but old-style and under-sized baffles may need to be replaced to accommodate the proper size filter. Installing an Effluent Filter is the most pro-active step a homeowner can take to help prolong the life of their septic system. All Effluent Filter installations must be in con-junction with our ANNUAL SERVICE PROGRAM (if the filters are not cleaned on a regular basis, they will clog, causing a back-up).
